Monobloc mounting with adjustable inclination for shooting at very long distances in metric measurement.

Assembly designed for shooting at very long distances, when the adjustment of the reticle of the scope fitted to the rifle is no longer sufficient to allow direct sighting.

Adjustable from 0 to 20 MRAD in steps of 5 MRAD each. It is not necessary to remove the mount as an adjustment on the weapon is possible. EraTac guarantees 100% repeatability and immediate return to zero.

Choosing a setting by Milli-Radians rather than by MoA simplifies the calculations for long range shooters working in the metric system (meters, m / s, cm ...)
