A telescopic moderator more imposing than its little brother the Victor, but providing greater sound attenuation

Compact ergonomics with its diameter of 41 mm, its length of 258 mm and its weight of 325g.

STALON silencers are designed by hunters and know how much weight and bulkiness can affect performance.

The VICTOR L differs from the VICTOR by its slightly larger measurements except for its diameter but allows a sound attenuation superior to its little brother.

With its telescopic design, the weight distribution brings rigidity to the barrel / sound moderator assembly, for unaltered precision unlike some silencers that attach directly to the muzzle.

Its rear chamber improves gas decompression providing excellent recoil attenuation.

An equipment for his quality hunting rifle for shooting discreetly during the approach, or the lookout.

In order to measure the sound attenuation power of their silencer, STALON relied on a protocol of strict military origin, the MIL-STD-1474D. This protocol is used in military equipment and makes it possible to measure in a precise and non-erroneous way, the capacity of a sound moderator for assault rifles and weapons of war.
