This kit includes a stock, pistol grip and vertical grip.

Stock:

The Daniel Defense adjustable stock is constructed from a proprietary blend of glass-infused polymers and finished with a soft-touch rubber overmold in strategic areas. The stock is precision-formed for mil-spec receiver extensions to minimize forward or lateral play, a common issue in many other stocks. This eliminates the need for a tensioning device or friction lock. The result is a durable stock that provides the shooter with a comfortable and repeatable cheek weld and unparalleled control of the firearm. The stock can be used with either of the two included buttpads or without any buttpads to customize the rifle to the operator's gear. The buttpads are available in two sizes: a thicker convex shape (0.8") and a thinner concave shape (0.5"), designed to prevent snagging when carrying the rifle. Limited rotation QD attachment points are integrated on both sides of the stock for ambidextrous sling connection.

Pistol Grip:

The Daniel Defense Pistol Grip is an improvement on the previous A2 grip. We designed our grip with ergonomics and control in mind. Our grip shares the classic 1911 pistol angle for the most natural hand position and comfortable feel. This pistol grip incorporates an oversized trigger guard that covers the gap between the grip and the lower receiver, which can cause hand fatigue and easily accommodates gloves. Installation is simplified because the integrated trigger guard does not require a pin, reducing the risk of damaging the lower frame. A soft-touch overmolded section improves grip, whether wet or dry.

Vertical handle:

The Daniel Defense vertical grip features a soft-touch rubber overmold for enhanced grip, whether wet or dry. Inside the grip is a double O-ring seal and a watertight storage compartment for small

parts. This grip is extremely lightweight and utilizes a simple yet durable mounting method for 1913 Picatinny rail systems.
