An ultra-comfortable Fabarm semi-automatic hunting rifle primarily intended for hunting wood pigeons!

The Fabarm XLR Colomba Palumbus semi-automatic shotgun is particularly intended for pigeon, migratory bird and waterfowl hunters who are looking for long range, a high rate of fire, ease of use and visual discretion.

The Latin name for the wood pigeon perfectly encapsulates this rifle's preferred hunting method. In addition to the XLR's inherent qualities, such as its barrel's ballistic performance and the rifle's stability during firing, this model boasts a truly attractive finish: the barrel and receiver feature a fully anti-reflective CERAKOTE MIDNIGHT BRONZE coating, while the stock and forend are finished in TRUETIMBER's STRATA camouflage pattern. For added convenience, the HIVIZ front sight, with its various fiber optic inserts, allows you to choose between round or triangular shapes and colors like white, red, or green. Finally, an XTREME EXTENDED choke, extending the barrel length by 15 mm, is ideal for increasing effective shooting distances.

- Conical sighting band 11 to 8 mm with fiber optic and intermediate barleycorn.
- Machined housing with 11mm prismatic rail for optical mounting.
- Stock length 368 mm - Drop at comb 35 mm - Drop at heel 55 mm - Stock spacers supplied with the weapon
- Chokes provided: 3 INNER HP (M-IM-Full) + 1 XTREME EXTENDED (Full)
- Available in fully right-handed or left-handed versions.

Rifles mainly intended for waterfowl hunters. Strata-like camouflage. Perfect hold in the hand thanks to the Soft-touch treatment of all the composite elements.

The Soft-Touch stock ensures great shooting comfort: the handle and the fore-end offer a rubberized feel that promotes grip while being very pleasant to the touch.

The Tribore barrels associated with the INNER HP and EXIS HP chokes make it possible to fire steel ball cartridges even in full chokes, unlike traditional shotguns which are limited to 1/2 coke!

The over bored Tribore barrels increase the speed of the pattern and the INNER HP chokes, which are more progressive than traditional chokes, promote more regular and better distributed shot or steel shot patterns.
