Improved receiver for AR15 M4E1

- Platform: AR15
- Material: Machined from forged 7075-T6 aluminum
- Finish: Black anodized
- Marking: "Cal Multi", "M4"
- Compatibility: standard AR-15 components and magazines
- Weight: 244g

M4E1 Lower Receiver Improvements:

- Bolt Lock Threaded Pin: Allows simple bolt lock installation and virtually eliminates the risk of damaging the finish during installation (pin included). A 1/16" hex wrench is required for assembly.
- Integrated Trigger Guard: Eliminates the possibility of breaking the trigger guard tabs by integrating the trigger guard into the underbody, creating a stronger, more rigid platform to build on.
- Top Tension Screw: Allows users to fine-tune the fit of the top and bottom frame using a nylon tension screw inserted into the bottom frame handle . This allows for a tight fit with any standard AR15 upper receiver.
- Detent Pin Threaded Housing: Allows user to easily install detent pin and spring using a 4-40 grub screw (no more running pins across the workpiece)).
- Increased Magazine Well Flare: Increased magazine well flare to facilitate quick and efficient magazine changes.
  Marked and milled to accept short throw safety shifters, but also works with standard shifters.
