PCC - Pistol Caliber Carbine rifles offer the handling of long guns combined with handgun calibers.

- Lower and Upper Enchanced EPC (9x19mm)
- Aero Precision unsealed cylinder head
- 11'' barrel at 1:10'' pitch
- Flip-up sights
- Magpul MOE SL-K stock mounted on standard 6-position receiver extension.
- Atlas R one 1'' handguard
- Magpul MOE SL-K stock
- Ambidextrous cocking lever
- VG6 Gama muzzle brake 1/2x28

Lower and Upper EPC:

Aero Precision's EPC-9 receiver assembly is precision machined from two 7075-T6 aluminum forgings and features a last cartridge hold open system. This EPC-9 assembly is compatible with standard frame Glock magazines and accepts 9x19 or .40S&W using the appropriate bolt carrier, barrel and magazine combination.

Cylinder head not seated:

The Aero Precision EPC/AR9 Bolt is the heart of your EPC construction. Machined from 8620 steel and featuring a nitride finish, a fracture-resistant grade 23 titanium axle and 4140 steel extractor, the EPC bolt is precision machined from the ground up to meet the extreme firearm demands of the blowback AR platform.

Ambidextrous cocking lever:

The BREACH® from Aero Precision is a rugged, ambidextrous, precision-manufactured charging handle for the AR15 platform. The BREACH design uses a reinforced 7075-T6 aluminum bar that

is capable of handling the most demanding tasks. Its ambidextrous levers feature a patent-pending dual-spring system, which directs operating force to the sturdy body of the charging handle. This allows the shooter to use a one-sided charging technique without compromising the part - a pitfall for traditional mil-spec charging handles.

The small lever configuration provides a discreet, easy-to-grip interface that is comfortable over the shoulder and can be operated effortlessly from both sides of the rifle.

VG6 Gama muzzle brake:

The VG6 GAMMA 9mm sets a new standard in recoil management by virtually eliminating all muzzle movement.

This muzzle brake/compensator hybrid virtually eliminates recoil and minimizes muzzle movement. The unique combination of braking and compensation characteristics inspires confidence in the shooter and allows him to make very rapid follow-up shots. Its unique design has been optimized for 9mm pressures, offering a very soft sensation in the shoulder thanks to the dimensions of the gas ports which have been tested to give the greatest possible control to the muzzle.
