The Canicom GPS location set has been developed to allow you to locate your dog and be guided towards him using the electronic compass

The Canicom GPS for dogs is a 2-in-1 package offering both long-range tracking and educational features. It uses a location system combining GPS, Galileo, Glonass and QZSS satellite technologies, with the ability for the user to easily change the 8 available channels, ensuring functionality throughout Europe. Robust and waterproof to immersion (IP67), this system is equipped with a free application compatible with IOS and Android, allowing the dog to be positioned on a map background.

Features of the Canicom GPS for dogs include a remote control equipped with high sensitivity GPS and an electronic compass to guide the owner to the dog. This remote control can locate up to 20 dogs over a range of 15 km, with an educational function covering up to 3 km. It also offers the possibility of knowing the state of the dog, whether moving or stationary, as well as detailed information such as master/dog distance, collar charge and GPS altitude.

The collar, also equipped with a high-sensitivity GPS, transmits information every 3 seconds and has educational features such as vibrations and stimulations.

The Canicom GPS application offers a display of the dog's position on a satellite or map map, the creation of landmarks, the installation of a virtual fence with alert in the event of leaving the area, the sharing of the

dog's position with other people, as well as calculating the route to find the dog.

This GPS tracking system is reliable and efficient, with a 2-year warranty. The whole thing is waterproof (IP67) for optimal durability.

Concerning the ergonomics of the Canicom GPS, the remote control has an unbreakable screen measuring 3.67 x 4.89 cm with a resolution of 240 x 320 px. Its autonomy can go up to 25 hours depending on the settings. The collar, for its part, is robust with a battery life of up to 30 hours depending on the settings. The dimensions and weight of the remote control are 148 x 58.6 x 39.5 mm for 250 g, while the collar measures 86 x 45 x 45 mm for 280 g. Both are powered by lithium-ion batteries, with the magnetic charger provided for each.

Content :

- 1 collar equipped with a high-sensitivity GPS antenna and a radio antenna
- 1 remote control equipped with a high sensitivity GPS antenna
- 1 long antenna for the remote control
- 2 magnetic chargers (USB cable + mains power supply)
- 1 programming cable
- 2 pairs of electrodes (short and long)
- 1 wrist strap
- 1 hard carrying case
- 1 user guide
- + **1 short remote control antenna**
- + **1 silicone remote control cover**
