The Guerini Invictus ArtCo combines modern engraving with the famous Invictus system which allows you to fire up to 1 million rounds with your rifle!

This revolutionary new system completely changes the way the barrels and body of the weapon lock when the rifle is closed, making the entire system incredibly strong.

You can measure the lifespan of your rifle not by the period during which you can shoot with it, but by the period during which your children and grandchildren will continue to use your weapon!

- Adjustable Sporting Stock - L. 377 mm
- Ascent Band
- Rubber butt plate
- Supplied with 8 long external chokes

- The wider receiver provides a larger contact surface with the metal structure of the handguard, increasing resistance while reducing friction.
- In order to reduce vibrations, an elastomer spacer has been added between the release button and the wood of the handguard.

DPS relaxation

The new **DPS (Durability, Precision, Speed) trigger** features innovatively designed hammers with new geometry and tighter tolerances.

In addition, the hammers benefit from an industrial chrome plating designed to have a minimum coefficient of friction and allow better lubrication. This makes the trigger mechanism durable, precise and regular.

Invictus Cams

Revolutionary **Invictus cams** do away with traditional trunnions and hinges.
This system makes the Invictus the first double-barreled shotgun that allows the connection point of the barrels and the receiver to be moved. This allows the guns to be moved back to eliminate a potential thunder day.

Invictus Lock

The **Invictus bolt** significantly increases the locking surface between the barrels and the receiver, incredibly extending the life of the assembly.
This part is also replaceable, thus multiplying the longevity of the mechanism. In this way, a rifle is obtained which, from the outset, is more resistant and durable, but which in addition can be rebuilt in a unique way among the superimposed ones.

DTS Action Control System

DTS Action Control System : To improve the comfort of shooters when opening and closing the shotgun, the handguard has been redesigned to include a new patented mechanism called DTS Action Control System. Using a 3mm hex wrench supplied with each shotgun, shooters can adjust the degree of friction between the fore-end and the receiver to achieve the ideal softness or firmness.

Also available in Trap, Trap Impact and Ascent versions

Invictus: adj. Latin meaning: unassailable, indefatigable, invincible.
