Optimized rifled barrel

The 61 cm barrel is **rifled with a long pitch** , allowing for tight patterns and excellent accuracy with bullets. This profile makes it a rifle suitable for medium-range sport shooting.

Integrated cantilever rail

The **cantilever Picatinny rail** mounts directly to the barrel, ensuring optics adjustment remains intact even after disassembly. It provides a robust platform for adding scopes or red dots.

Proven robustness

The **Ergal 55 frame** and steel parts ensure strength and reliability. Compatible with **12/76 Magnum** ammunition and **steel balls** , the rifle is tested to a pressure of 1630 bar for superior resistance.

Shooting comfort

The **straight, parallel-sloped stock** limits barrel lift and promotes stable, repeatable aiming. The integrated pistol grip improves handling during extended sessions.

Modern ergonomics

The textured handguard and smooth pump action facilitate rapid reloading. The front sight with red fiber optics allows for immediate target acquisition, even in low light.
