**The Stalon VR-Venti is designed for semi-automatic weapons such as the AR-10 and AR-15, and is very easy to use - just attach it and you're ready to go.**

The Stalon VR-Venti is designed specifically for gas-operated semi-automatic firearms, providing effective sound reduction and perfect compatibility with handguards. Featuring advanced internal technology, which prevents gas back-up and reduces blowback, the Stalon VR-Venti is perfect for shooting. The Venti has the same rear end as the VR, but is combined with a different front end.

The Stalon VR-Venti silencer features a design optimized for gas-operated semi-automatic weapons, such as the AR-10 and AR-15. Its unique "Venti" technology effectively reduces gas pressure, eliminating the need for adjustments or modifications to the weapon.

With an overall length of 191 mm, of which 139 mm extends beyond the barrel and 52 mm covers the barrel, the VR-Venti offers a balanced weight distribution, improving the weapon's handling. Its tapered diameter of 41.5 mm at the front facilitates its integration with handguards, providing a harmonious aesthetic and practical use. Weighing from 237 grams with the barrel support, it does not weigh down the weapon, allowing prolonged use without fatigue.

The VR-Venti is available with standard threads such as 1/2-28 and 5/8-24, ensuring compatibility with a wide range of firearms. Optimized for calibers from .223 to 6.5x55/6.5 Creedmoor, it offers sound attenuation up to 28.5 dBc for the .223 caliber, improving hearing comfort and reducing recoil.

Its high-quality anodized aluminum and stainless steel construction ensures exceptional durability, withstanding the most demanding shooting conditions. In addition, its matte black finish with a central gold ring gives it an elegant and professional look.

By choosing the Stalon VR-Venti, you are opting for a silencer specially designed to optimize the performance of your semi-automatic weapon, combining efficiency, lightness and neat design.
