Switch from daylight to thermal imaging in the blink of an eye with Landsat Compact PARD, for increased accuracy day or night.

The PARD Landsat Compact integrates four observation channels, including thermal imaging and night vision, allowing rapid adaptation to changing conditions in the field. Its compact and lightweight design ensures exceptional maneuverability, while its integrated laser rangefinder guarantees accurate distance measurements up to 1,200 meters.

Technical characteristics:

- Thermal sensor
- Thermal resolution
- Pixel size
- NETD
- Frame rate
- Visible sensor
- Sensitivity
- Lens
- Optical magnification
- Digital zoom
- Field of vision
- Laser rangefinder
- Screen
- Eye relief
- Video Recording
- Storage
- Connectivity

- **Power supply**
- **Autonomy**
- **Weather resistance**
- **Material**
- **Weight**
- **Dimensions**

The PARD Landsat Compact multispectral scope is designed for demanding hunters looking for an all-in-one solution for observation and shooting. With its thermal and night observation channels, it allows long-range detection and clear target identification, day and night.

Its high-sensitivity thermal sensor, with a NETD of $\approx 20\text{mK}$ and a pixel size of $12\mu\text{m}$, detects the slightest temperature variations, providing clear images even in adverse weather conditions. The 2560×1440 pixel CMOS sensor offers color day vision and black and white night vision, ensuring maximum versatility.

The built-in laser rangefinder allows for accurate measurements up to 1,200 yards, making it easy to estimate distances for effective shots. The ballistic calculation function, combined with the rangefinder data, automatically adjusts the point of impact, improving shooting accuracy.

The Landsat Compact also offers a Picture-in-Picture (PIP) mode, displaying the thermal and night channels simultaneously for better scene analysis. Its 800×800 pixel circular IPS display and 100 mm eye relief provide optimal viewing comfort, even during long observation sessions.

Constructed from high-grade aluminum alloy, the scope is weather-resistant with an IP67 certification, ensuring protection against dust and temporary immersion in water. It is also designed to withstand recoil up to 6,000 joules, making it compatible with a wide range of calibers.
