Mounting clamps:

Pair of collars with a simplified structure in 2 parts and 4 screws to be both solid and economical.

Kastelberg has developed a more economical collar concept by combining the functions of tightening the scope and fixing the collar to the rail in a single mechanism! Each collar is made up of two vertical half-collars and tightening the 4 screws allows both the bezel to be tightened in the collar and the rail in the clamp claws.

Quake The claw suspender:

Standard Quake model strap which can be attached to a Bergara rifle thanks to its metal rings.
