- **Butt plate:** solid rubber.

- **Focus point:** spherical white.
- **Chokes:** Maxis Competition.
- **Approximate weight:** 3.9 kg, variable depending on the density of the wood.
- **Delivery:** Thermo Wooden case.

**A raised strip to help regain one's bearings**

On a shooting range, consistency begins with a reproducible shouldering of the rifle. The **9mm top rib** provides an elevated sight line, which, combined with stock adjustment, ensures a comfortable head position. The spherical white front sight offers a simple visual reference during setup.

**An adjustable DTS stock adapted to the shooter**

The **adjustable DTS stock** allows you to adjust the cheek rest to better align your eye with the line of sight. In practice, this customization helps you find your bearings without having to change your posture with each shoulder. The stock is 377 mm long and features a solid rubber butt plate.

**76cm cannons for Sporting**

The **76 cm barrels** are designed for sporting clays and for following clay target trajectories. The approximate weight of 3.9 kg gives the rifle a noticeable presence in the hand, which should be adjusted according to the shooter's size and shooting habits. The rounded Winged forend enhances the contact points and contributes to a comfortable grip.

**Selective trigger and Maxis Competition chokes**

The **selective trigger** allows you to choose the firing order of the barrels. **Maxis Competition chokes** allow you to adapt the constriction to the presentations encountered, while respecting compatibility and the manufacturer's recommendations. This configuration provides retailers with a relevant basis to guide shooters in choosing their clay target equipment.

**A dedicated case for storage**

The **Thermo Wooden case** accompanies the rifle for storage and transport to the shooting range. After each session, maintenance according to the instructions helps preserve the surfaces, barrels, and mechanical components.

**FAQ**

**What is special about the Ascent Sporting configuration?**

It combines a raised 9mm top band with an adjustable DTS stock, in order to customize the cheek rest and the placement of the eye relative to the line of sight.
