A high-precision assembly with quick locking and constant clamping

The **INNOMOUNT ZERO quick-release mount** for **Blaser R8 Ultimate X** and **Swarovski SR** rail-mounted scopes combines mechanical precision, robustness, and ease of use. Its quick-release locking system with **Torque Lock** ensures consistent clamping force and compensates for manufacturing tolerances in compatible interfaces. Installed or removed in seconds without tools, this mount, made of high-strength aluminum and hardened steel, promotes repeatable optic positioning. Its low-profile design of 23 mm ensures discreet integration, perfectly suited to the demands of hunting.

- **Brand:** INNOMOUNT
- **Range:** ZERO
- **Type:** Quick-release optical mount
- **Weapon compatibility:** Blaser R8 Ultimate X
- **Optical compatibility:** Glasses equipped with a Swarovski SR rail
- **Mounting system:** Quick, tool-free locking
- **Technology:** ZERO Torque Lock
- **Clamping adjustment:** Automatic compensation for interface tolerances
- **Construction height:** 23 mm
- **Total length:** 180 mm
- **Weight:** 180 g
- **Materials:** High-strength aluminum and hardened steel
- **Installation:** Tool-free, using two locking levers
- **Finish:** Black
- **Use:** Attaching a Swarovski SR rail-mounted riflescope

INNOMOUNT ZERO: the precision of a quick-release assembly

Changing your scope should never be a complicated operation. With its **ZERO** system, INNOMOUNT offers a **quick-release optical mount** designed to combine ease of handling, secure attachment, and repeatable positioning.

Specifically designed for the **Blaser R8 Ultimate X** , this model accommodates scopes equipped with the **Swarovski SR rail** . Its one-piece construction ensures a rigid connection between the weapon and the optic, while allowing for quick removal when operating conditions require it.

In the field, the benefit is obvious: a few simple steps are all it takes to remove or replace your equipment, without having to look for a wrench or an adjustment tool.

ZERO Torque Lock: a constant clamping force

The unique feature of this assembly lies in its **ZERO Torque Lock** technology. This integrated locking mechanism was developed to maintain a **constant clamping force** , regardless of slight dimensional variations encountered between different compatible interfaces.

The system automatically compensates for mechanical tolerances during locking. This ensures reproducible tightening without requiring manual adjustment for each installation.

This secure mounting contributes to the **repeatability of the scope's positioning** , an essential criterion when optics need to be removed and then reinstalled. Maintaining the correct sight alignment naturally depends on the quality of the entire rifle, mount, and optics assembly.

Two locking levers for tool-free installation

The mechanism relies on **two quick-release levers** , directly integrated into the body of the assembly. Their operation allows the assembly to be fixed or released in seconds, without any additional accessories.

The system's simplicity is a real advantage in use. Simply perform the required locking operations to securely install the assembly onto its compatible interface.

This design makes changing optics particularly intuitive, even for a user unfamiliar with detachable mounts. It also facilitates the separate transport of the scope and rifle when necessary.

A dedicated interface for the Blaser R8 Ultimate X

Developed for the **Blaser R8 Ultimate X** , this mount features a geometry adapted to the rifle's mounting interface. Its design ensures a precise and stable mechanical connection, essential for maintaining alignment between the rifle and the scope.

The offset body positions the optics mounting area to provide an installation adapted to this configuration. This design allows for the integration of the locking system while maintaining a compact and coherent overall appearance.

For hunters equipped with an R8 Ultimate X, it constitutes a specific solution, designed to combine ease of installation and mechanical robustness.

Rail Swarovski SR: a direct and rigid mounting of the optics

This model is designed to accommodate a **scope equipped with the Swarovski SR rail** . This mounting interface differs from traditional mounts that use rings around the scope body.

The rail allows for a direct mechanical connection to the compatible mount. The optic is thus held in place by its dedicated mounting structure, without the need for a ring clamp on its main tube.

This design promotes a clean installation and good overall stability. It is suitable for users looking for a **Swarovski scope mount with an SR rail** compatible with their Blaser rifle.

Low-profile 23 mm construction: compact integration

With a **build height of 23 mm** , the ZERO mount prioritizes a low-profile optic. This feature helps maintain a balanced silhouette and minimize the overall vertical bulk.

The position of the scope plays an important role in aiming comfort. Proper placement allows for a more natural cheek rest and ensures consistent alignment with the optical axis.

The final height of the scope depends, however, on its dimensions and the geometry of the weapon. In particular, it is important to check the available clearance for the objective lens.

High-strength aluminum and hardened steel: robustness and lightness

INNOMOUNT combines a **high-strength aluminum** body with **hardened steel** components. This combination of materials meets two complementary requirements: controlling the weight of the assembly and ensuring the robustness of the mechanical elements subjected to locking forces.

Aluminium contributes to the lightness of the structure, while hardened steel reinforces the parts stressed during repeated handling.

With a **total length of 180 mm** and a claimed weight of 180 g, this design seeks a balance between rigidity, bulk and resistance to use.

Its discreet black finish blends naturally with the aesthetics of modern rifles and optics.

A setup designed to meet the demands of the field

When using a quality scope, the mount is a crucial element of the sighting system. An imprecise or difficult-to-reproduce mount can compromise the benefits of high-performance optics.

The **INNOMOUNT ZERO system** addresses this issue with a mechanism designed to simplify handling without compromising clamping quality.

Whether it's for easier transport of equipment, temporarily removing a scope, or quickly regaining a shooting configuration, the device offers a practical and reassuring mechanical solution. It is precisely this combination of simplicity and technical expertise that makes a high-end removable mount so appealing.

FAQ

Is this INNOMOUNT ZERO mount compatible with the Blaser R8 Ultimate X?

Yes. This version of the INNOMOUNT ZERO mount is specifically designed for the Blaser R8 Ultimate X rifle. It allows the installation of a scope equipped with the Swarovski SR rail.

Can the scope be removed and replaced without losing its setting?

The ZERO Torque Lock system is designed to ensure consistent clamping force and promote repeatable positioning after disassembly and reassembly. This helps maintain the optic's alignment. However, checking the point of impact is still recommended after any configuration changes.

Is a tool required to install the INNOMOUNT ZERO mount?

No. The assembly features two quick-release levers for tool-free installation and removal. The Torque Lock mechanism automatically adjusts the clamping force to compensate for tolerances in compatible interfaces.
